## **Worst Red-Light Runners of 2015 Video Reminds Drivers to Stop on Red**

**(Miami, FL December 30, 2015)** - The City of Miami joins American Traffic Solutions (ATS) in educating the public about the worst that may happen when someone recklessly runs a red light. In years past, Florida jurisdictions using red-light safety cameras have seen a decrease in red-light running related collisions.

Red-light running crashes are the most common of urban crash, claiming an average of nearly two lives each day, from 2009 through 2013, according to the latest figures available from the National Center for Statistics and Analysis, an office of the National Highway Traffic Safety Administration. About half of those killed by red-light running related collisions are typically pedestrians, bicyclists and occupants in other vehicles who were hit by the red-light runner.

Unfortunately, red-light safety cameras cannot stop all red-light running. A video compilation provided by American Traffic Solutions aims to show just how dangerous red-light running is and just how violent a red-light running collision can be. This is a reminder to drivers to always obey the law and, most importantly, to stop on red.
